

Get to know us:

Our business is one of passion, passed on from one generation to another in the pursuit of making the highest quality impact products in the industry. The creator of EMC started as a line worker for one of the biggest manufacturers at the time. From early on, he spotted the design faults and deficiencies in the trade and set out to do something about it.

We started in a humble 1,000 square foot facility with not much but some old refurbished equipment and a whole lot of ambition. It was an instant hit. The result was innovative, elegant, and easy to install. Before we knew it, our shop grew through the word of mouth of our customers and our team's commitment to quality and customer service. Today EMC stands at over 80,000 square feet of manufacturing space and is regularly adding new systems, options, and design features to our product line up.

HR 2100

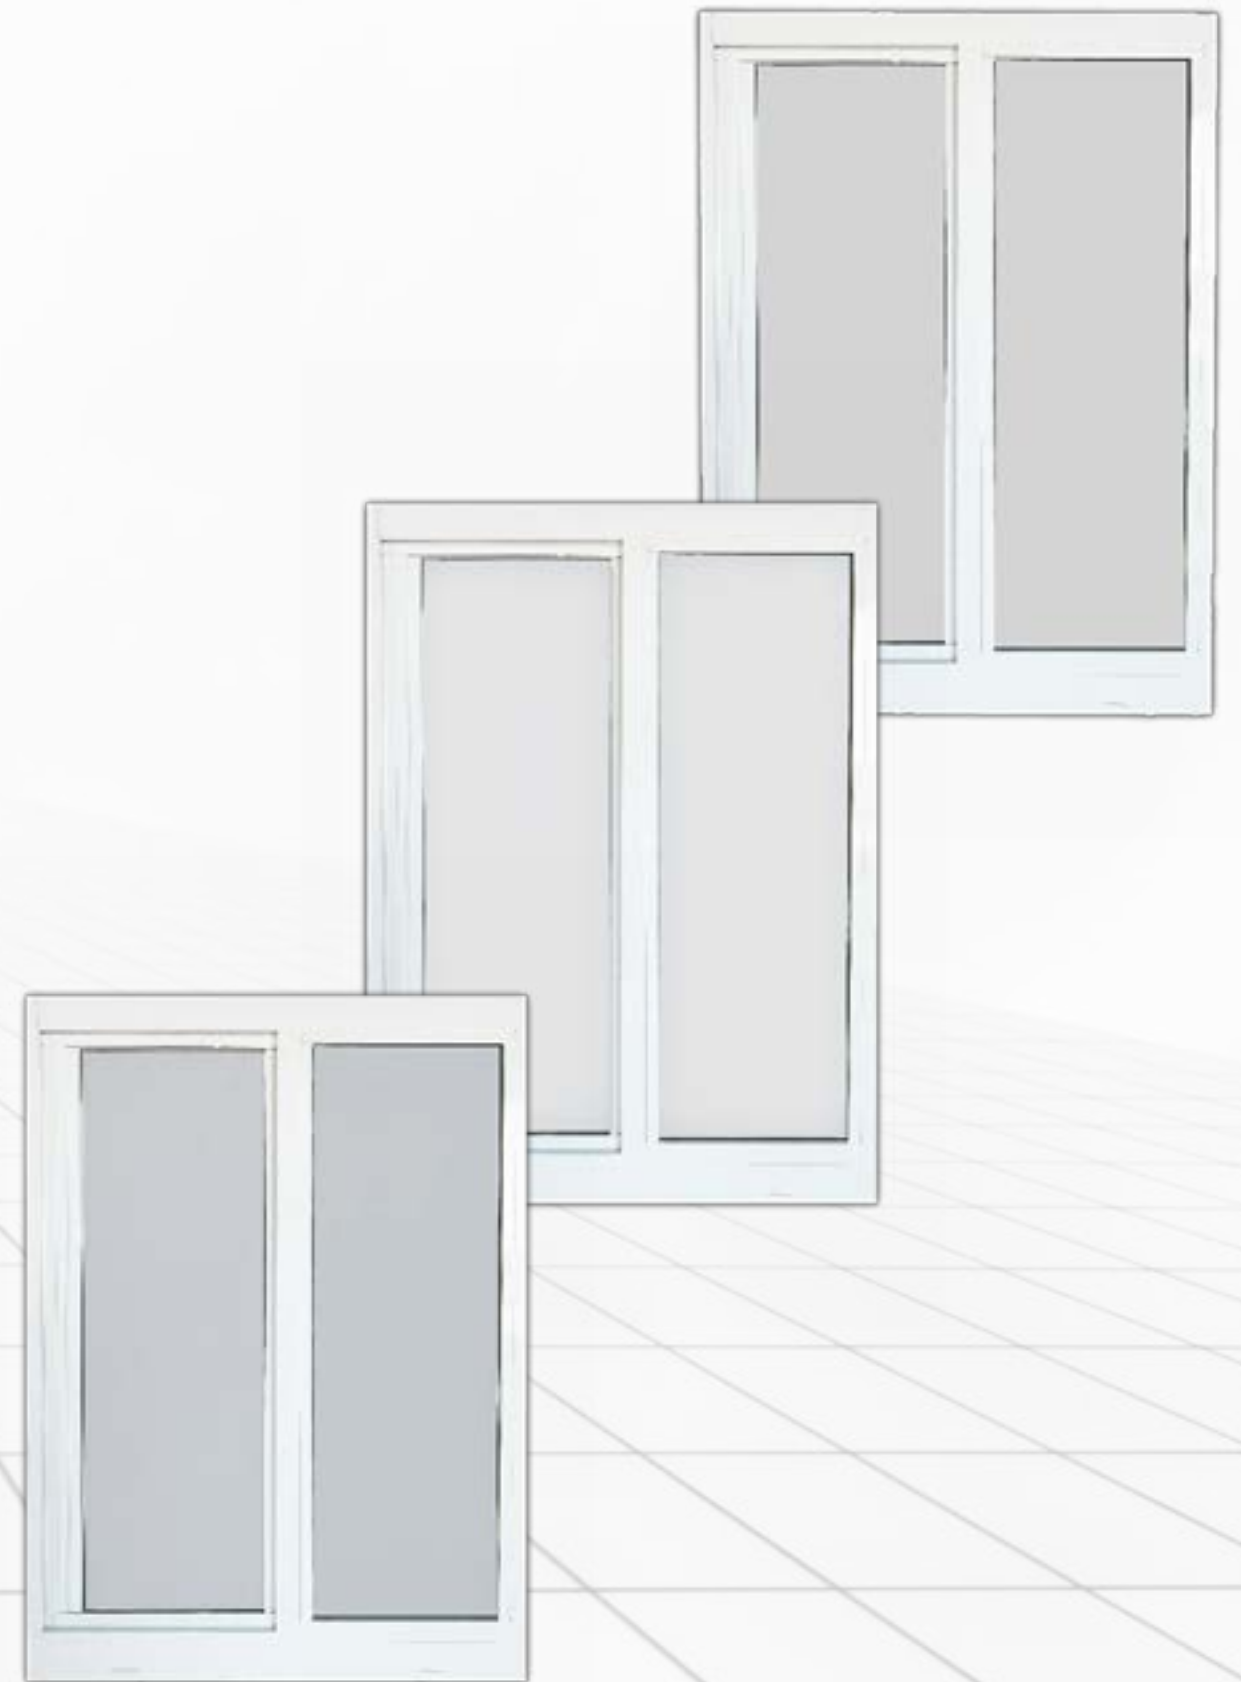

Horizontal Rolling

Overview

An impact-resistant horizontal rolling window operates similar to a sliding door. Sliding windows sash slides open — perfect for satisfying bedroom egress requirements — and makes for popular style in contemporary and modern homes.
